These vulnerable rural communities are affected the most, yet have contributed the least to causing climate change. Up to 70 percent of the world’s food supply is produced by smallholder farmers. Due to the effects of climate change, productivity of certain agricultural crops is declining, having a direct impact on Fairtrade farmers revenues and food security. Fairtrade recognizes that farmers need to adapt to climate change and sustainably develop, to be able to protect their livelihoods.

It is everyone’s responsibility — including organizations, businesses and consumers — to reduce their carbon emissions, and support climate change mitigation and adaptation projects in the communities most affected by negative impacts. Many farming and community groups are already taking action to adapt, but need more financial and technical support to confront these new challenges.

**FAIRTRADE’S RESPONSE**

Fairtrade provides unique benefits, such as the Fairtrade Minimum Price and Premium. Our standards foster organizational development, environmental and financial sustainability, and greater autonomy; providing a strong foundation for farmers to begin implementing climate change adaptation measures. But we also recognize that producers need additional support and funding to effectively deal with the multi-faceted effects of climate change.

That’s why Fairtrade has developed a climate change strategy, focusing on support for climate change adaptation projects, climate change standards, and producer-driven advocacy. Our overall aim is to enable vulnerable producers to adapt to climate change and support them to mitigate the impacts, while promoting further sustainable development practices.

BAYARDO BETANCO, PRODECOOP FAIRTRADE COFFEE COOPERATIVE, NICARAGUA

“**FAIRTRADE PRODUCERS URGES GOVERNMENTS AND INTERNATIONAL ACTORS INVOLVED IN THE AGRICULTURAL SECTOR TO WORK TOGETHER TOWARDS ACHIEVING FOOD SECURITY AND SOVEREIGNTY FOR THE REGIONAL AND GLOBAL POPULATION. DEVELOPMENT BASED SOLELY ON UNLIMITED GROWTH OF PRODUCTION AND CONSUMPTION IS UNSUSTAINABLE, FOR BOTH PEOPLE AND PLANET.**”

STATEMENT FROM THE FAIRTRADE PRODUCER NETWORKS ON THE EVE OF COP20
SUPPORTING FARMERS TO ADAPT

Fairtrade is raising awareness on climate change amongst producer organizations, and supporting them to develop adaptation plans. Through additional expert technical support, field schools, and demonstration sites, producers are learning how to implement adaptation measures in their own farms and communities using the training-of-trainers approach. Fairtrade Producer Networks are coordinating the projects and supporting farmers to share best practices.

With the help of public and private funding, Fairtrade has developed a number of adaptation projects such as reforestation in Peru to protect coffee farmers’ crops from the sun, and creating demonstration farming plots with tea farmers in Kenya.

A FAIRTRADE APPROACH TO CARBON PROJECTS

Fairtrade is currently developing a new scheme for carbon projects in partnership with the Gold Standard Foundation, leading standard for climate development projects. We plan to increase producer participation, create direct links between producers and buyers, provide greater transparency in the supply chain, and increase communities’ resilience to climate change. The scheme will enable communities and farmers to gain greater access to the carbon market and more of the income generated from sales.

Businesses will be required to assess their carbon footprint, put in place credible carbon reduction measures, and compensate what cannot be further reduced with Fairtrade carbon credits, in compliance with the scheme. This will provide companies with a way to create positive climate action, in line with their greater emissions reduction programme and corporate social responsibility targets.

The standard for Fairtrade carbon credits was drafted in consultation with social carbon experts, NGOs and farmer representatives, and is expected to launch in market mid-2015.

A VOICE FOR FARMERS IN THE CLIMATE DEBATE

The Fairtrade Producer Networks, with the support of Fairtrade International, have also developed a climate change advocacy plan focusing on international climate change negotiations and regional discussions. This has enabled Fairtrade producers to take part in events such as COP20, and make the views of smallholders heard in the international climate debate.
